

AI Observability

Functional requirement

Design and implement AI observability tool which can track usage across Radware organization and give insight to increase efficiency in terms of cost and usage.

Non-Functional Requirement

System should accept ai metrics data from 1000 developers

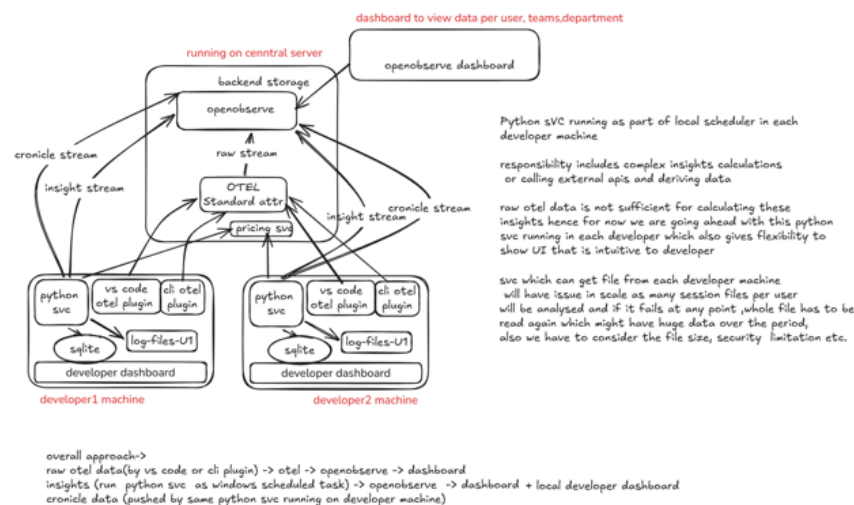

System should provide support for mac , windows

System should be highly available

System should scalable horizontal to accept the load.

System should be secure to use.

High Level Design:

Steps to run OTEL and OpenObserve:

```
appadmin@vm-sdlc-metrics:~/roshan/observability1/scripts$ chmod 777 *
appadmin@vm-sdlc-metrics:~/roshan/observability1$ sudo CERT_EXTRA_SANS="IP:34.14.177.44"
./scripts/generate-certs.sh
appadmin@vm-sdlc-metrics:~/roshan/observability1/certs$ sudo chmod 777 *
appadmin@vm-sdlc-metrics:~/roshan/observability1$ sudo bash ./scripts/setup-observability.sh
```

Steps required in developer machine:

clone the repo [rdwr-akashs/rdwr-copilot_dashboard](https://github.com/rdwr-akashs/rdwr-copilot_dashboard)

single installation command for windows

navigate to agent folder after checkout and run below command

```
1 powershell -ExecutionPolicy Bypass -File .\Setup-CopilotOtelAgent.ps1
```

attaching ca.crt copy to your machine and give path when asked

ca.crt
07 Sep 2026, 09:08 AM

```
PS C:\projects\rdwr-copilot_dashboard-openobserve-agent\agent> powershell -ExecutionPolicy Bypass -File .\Setup-CopilotOtelAgent.ps1
OTEL resource attributes (e.g. team.name=team1,department.name=dept1,user=YourName,org=AMS): team.name=team1,department.name=dept1,user=YourName,org=AMS
Path to OTEL exporter certificate (ca.crt): C:\projects\certs\ca.crt
Set 16 environment variable(s) at User scope (open a new terminal/VS Code window for other processes to see them).
OpenObserve password for admin@localhost.dev: *****
Stored encrypted credentials at C:\Users\Roshank\AppData\Local\copilot-dashboard\openobserve.cred.xml
Registered scheduled task 'CopilotDashboardOpenObserve' (every 360 minute(s) and at logon).
Insights stream: https://34.14.177.44:5080/api/default/insights/_json
Chronicle streams: https://34.14.177.44:5080/api/default/copilot_chronicle_(usage, costs, sessions, files, turns)/_json
Per-stream URL overrides: the 'ChronicleStreamUrls' object in C:\projects\rdwr-copilot_dashboard-openobserve-agent\agent\config\agent-urls.json
Run it now with: Start-ScheduledTask -TaskName CopilotDashboardOpenObserve
Log file: C:\Users\Roshank\AppData\Local\copilot-dashboard\agent.log
PS C:\projects\rdwr-copilot_dashboard-openobserve-agent\agent>
```

for mac users try this →

```
1 cd /path/to/rdwr-copilot_dashboard-openobserve-agent/agent
2 chmod +x setup-copilot-otel-env.sh
3 ./setup-copilot-otel-env.sh
```

setup summary for reference (intellij users has to follow step2 mentioned below as single command installer doesn't cover that)

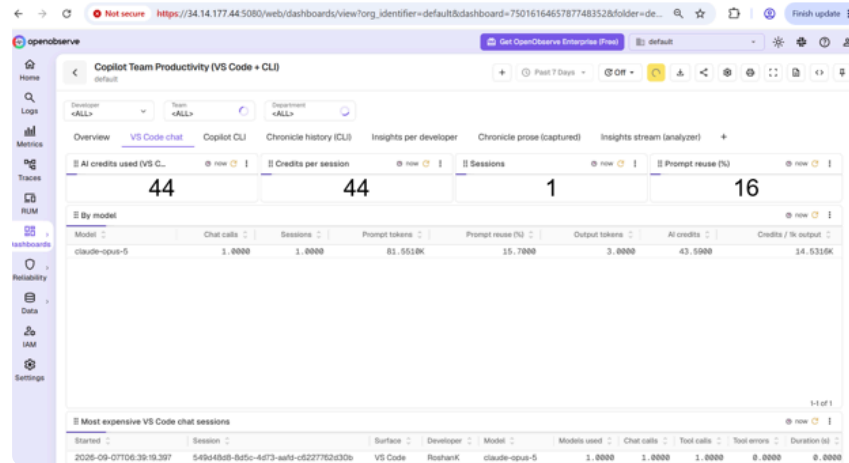

```
1 Step1> export below enviroment variables in your system
2 export OPENOBSERVE_INSECURE_TLS=true
3 export OTEL_RESOURCE_ATTRIBUTES= "team.name=team1,department.name=dept1,user=AkashS,org=AMS"
4 export OTEL_SERVICE_NAME=github-copilot
5 export OTEL_INSTRUMENTATION_GENAI_CAPTURE_MESSAGE_CONTENT=true
6 export OTEL_EXPORTER_OTLP_PROTOCOL=http/protobuf
7 export OTEL_EXPORTER_OTLP_ENDPOINT=https://34.14.177.44:4317
8
9 export OTEL_EXPORTER_OTLP_CERTIFICATE= C:\projects\certs\ca.crt
10 # note cert will be provided as part of installation instruction
11 export COPILOT_OTEL_EXPORTER_TYPES=otlp-http
12 export COPILOT_OTEL_ENABLED=true
13 export COPILOT_OTEL_CAPTURE_CONTENT=true
14 alternatively we can also set it via vs code settin
15 open Visual Studio Code, ctrl+shift+p -> user settings -> settings.json {
16     "github.copilot.chat.agentDebugLog.fileLogging.enabled": true,
17     "github.copilot.chat.otel.enabled": true,
18     "github.copilot.chat.otel.exporterType": "otlp-http",
19     "github.copilot.chat.otel.protocol": "http/protobuf",
20     "github.copilot.chat.otel.otlpEndpoint": "https://34.14.177.44:4317",
21     "github.copilot.chat.otel.captureContent": true,
22     "chat.viewSessions.orientation": "stacked"
23 }
24 Step2> intellij copilot settings (required only if you use intellij)
25 Settings-> GitHub copilot -> Chat -> Enable Open Telemetry support (enable)-> configure OTLP endpoint
26 https://34.14.177.44:4317
27
28 step3> clone the repo <TBD>
29 For windows navigate to agent folder and run below
30 .\install-openobserve-agent.ps1
31 >> -Url 'https://34.14.177.44:5080/api/default/insights/_json'
32 >> -ChronicleBaseUrl 'https://34.14.177.44:5080'
33 >> -ChronicleOrg 'default'
34 >> -PricingApiUrl 'https://34.14.177.44:8080/v1/copilot-pricing'
35 >> -UserName 'admin@localhost.dev'
36 >> -IntervalMinutes 360
```

to monitor locally C:\Users\<username>\AppData\Local\copilot-dashboard\agent.log

to check developer dashboard C:\Users\<username>\AppData\Local\Temp\dashboard.html

to check data in openobserve <https://34.14.177.44:5080/web>

Note: Close your VS Code or IntelliJ after running script to see the your data in openobserve

pricing svc <https://34.14.177.44/pricing/v1/copilot-pricing>
